Before you start playing, it's crucial to set up your drum kit correctly. This involves positioning the drums and cymbals in an ergonomic way that allows you to reach them comfortably. Here's a step-by-step guide:

1. **Place the snare drum** in front of you, approximately 6 inches from the edge of your seat.
2. **Position the tom-toms** to your left and right, with the higher-pitched tom on the left.
3. **Set up the bass drum** behind the snare drum and ensure it's at a height that allows you to comfortably reach the pedal.
4. **Position the hi-hat** to the right of the snare drum and adjust the height so that the cymbals are at ear level.
5. **Add the crash and ride cymbals** to your left and right, respectively, and adjust their positioning for easy access.

Now that your kit is set up, let's dive into some basic drumming techniques. These are the foundation for more advanced rhythms and patterns.
